## ▪ Data Center

## ▪ Artificial Intelligence

- Data center consumed about **1.5%** electricity globally, which is around **300TWh** [1]. It accounts for **23** nuclear power plants [2].
- ChatGPT uses **10GWh** electricity in Jan. 2023 to response to inquiries [3].
- One training ChatGPT (GPT-3) consumed around **1.3GWh** electricity [4].

**1% efficiency improve = 1/4 Nuclear power plant  
~3Gton of Co2**

- Moore's Law for CPUs and GPUs [1]

- Average Server Rack Density [2]

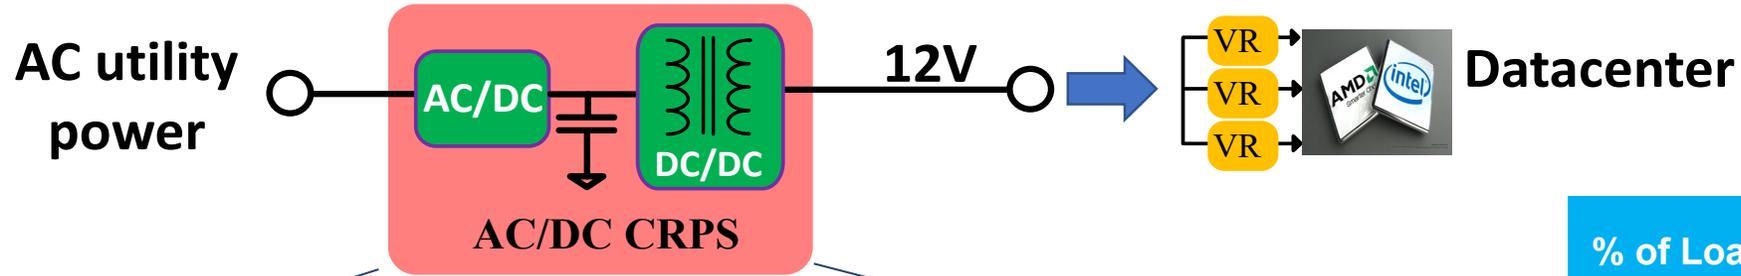

- Power consumption for GPU and CPU keeps increasing according to Moore's Law.
- AI requires more powerful processors for machine learning.
- Higher server rack power density is required.

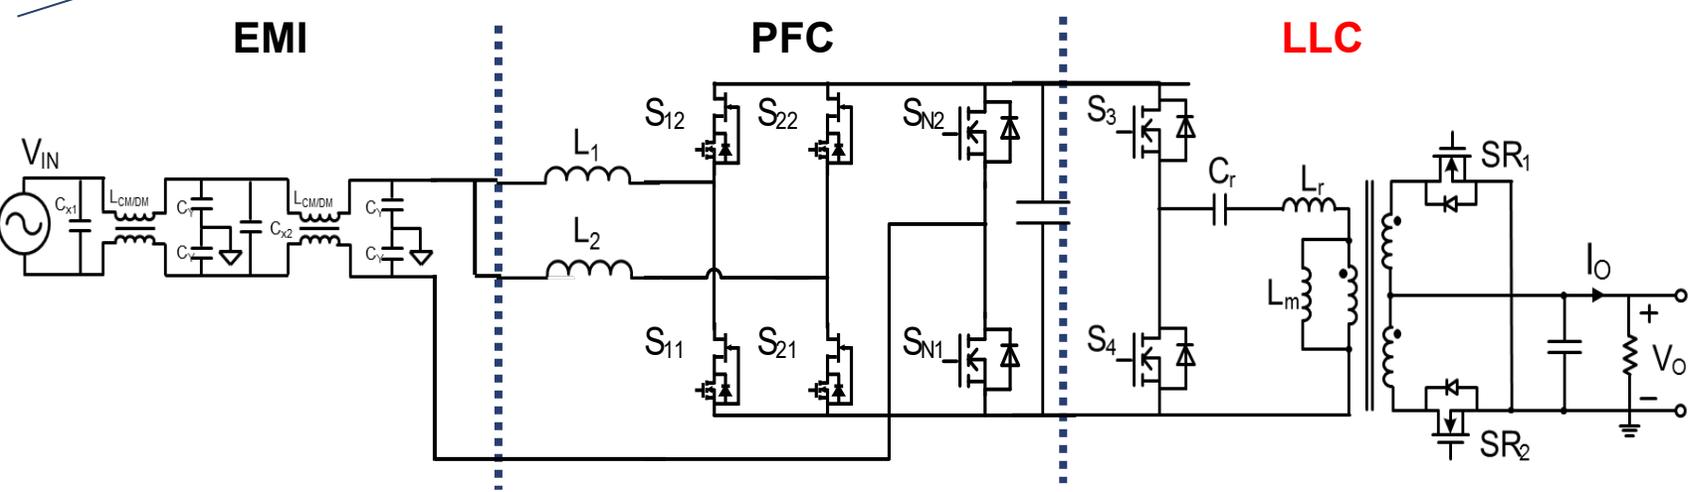

High power density power supply is required!

# Data Center Power Supply Structure

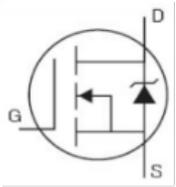

% of Load	10%	20%	50%	100%
<b>Titanium</b>	90%	94%	96%	91%
Platinum		90%	94%	91%
Gold		88%	92%	88%
Silver		85%	89%	85%
Bronze		81%	85%	81%

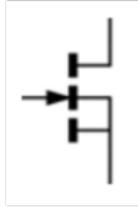

# Integrated GaN Power IC from Navitas

## Silicon FET

- High  $Q_g$
- High  $Q_{rr}$
- High  $C_{oss}$
- $F_{sw} < 100$  kHz

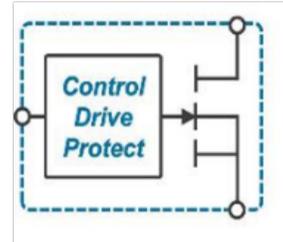

## Discrete GaN

- ✓ Low  $Q_g$ ,  $Q_{rr}$  and  $C_{oss}$
- ✓ Fast switching
- Sensitive gate drive
- Additional gate drive
- Additional ESD protection
- High quality layout

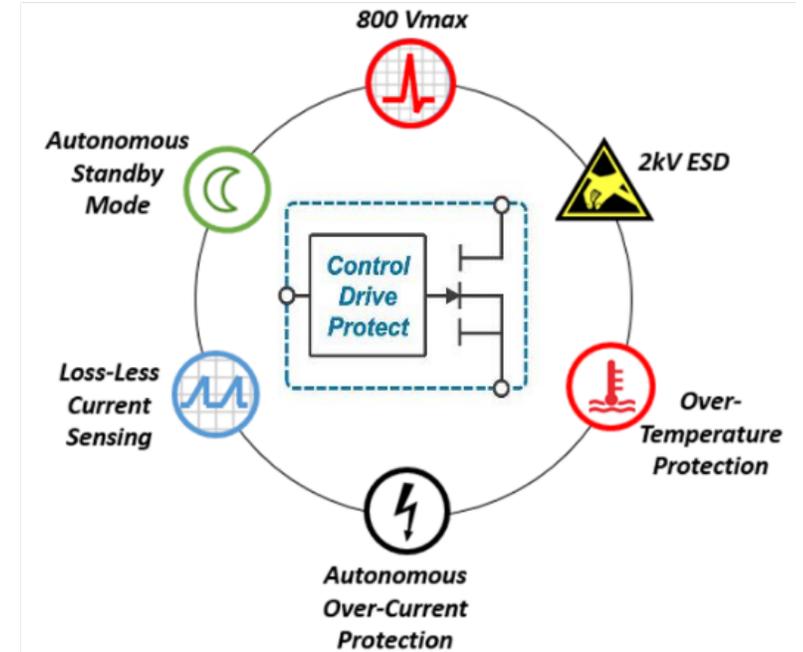

500 kHz

## GaNFast™

- ✓ Integrated gate driver
- ✓ High  $dV/dt$  immunity
- ✓ Easy layout
- ✓ Turn on  $dV/dt$  control
- ✓ 2 kV ESD protection

## GaNSense™

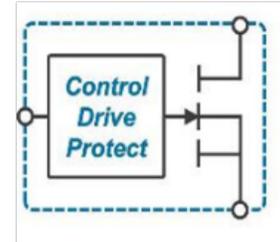

### GaNSense with GaNSafe:

- ✓ Integrated gate driver
- ✓ Short circuit protection
- ✓ Over temperature protection
- ✓ Turn on/off  $dV/dt$  control

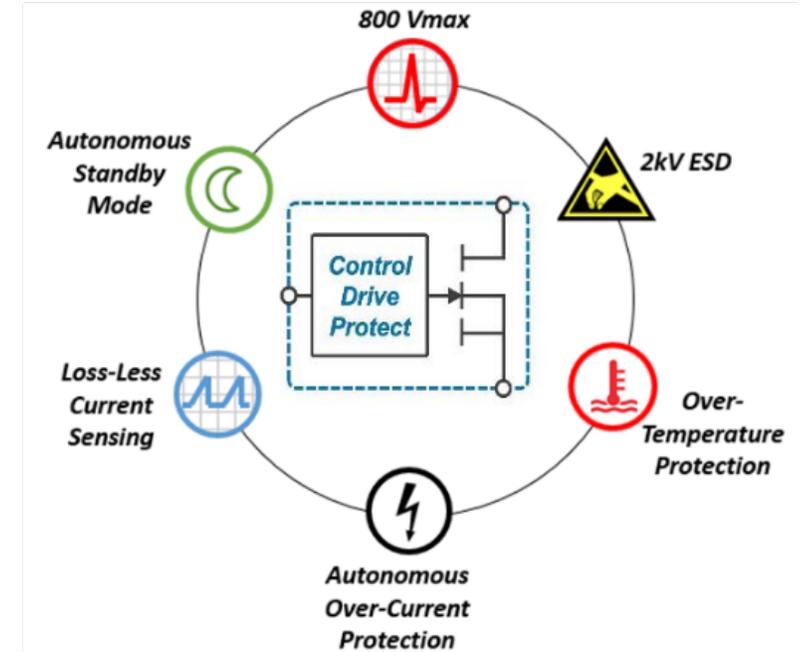

500 kHz

GaNFast™

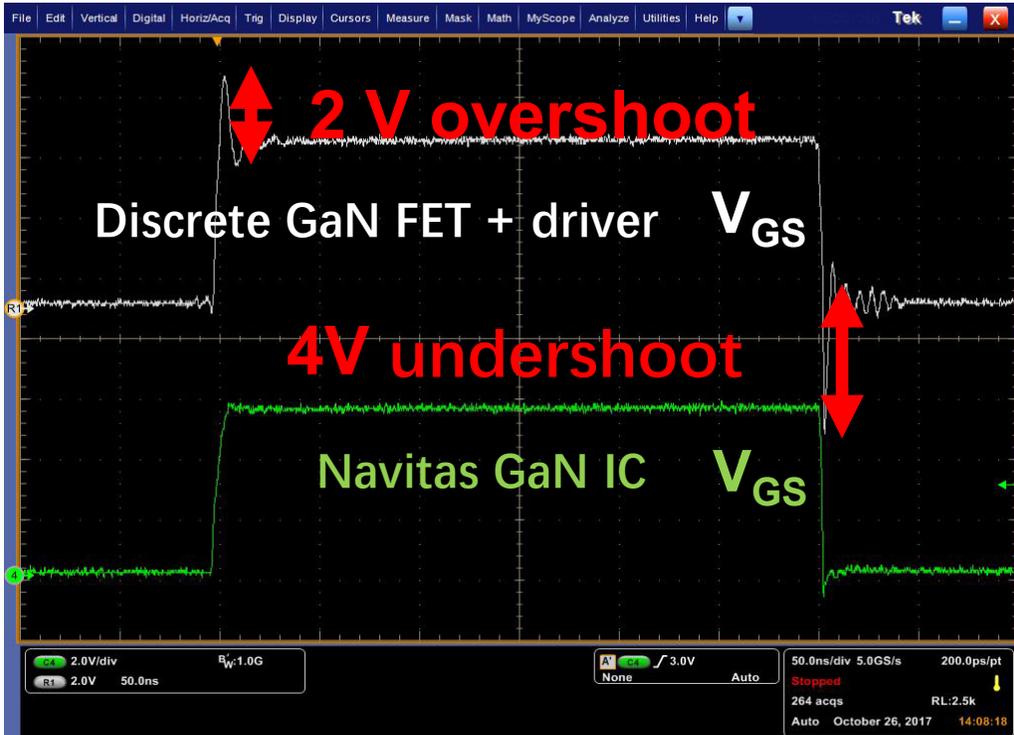

- ✓ Integrated gate driver
- ✓ High dV/dt immunity
- ✓ Easy layout
- ✓ Turn on dv/dt control
- ✓ 2 kV ESD protection

GaNSense™

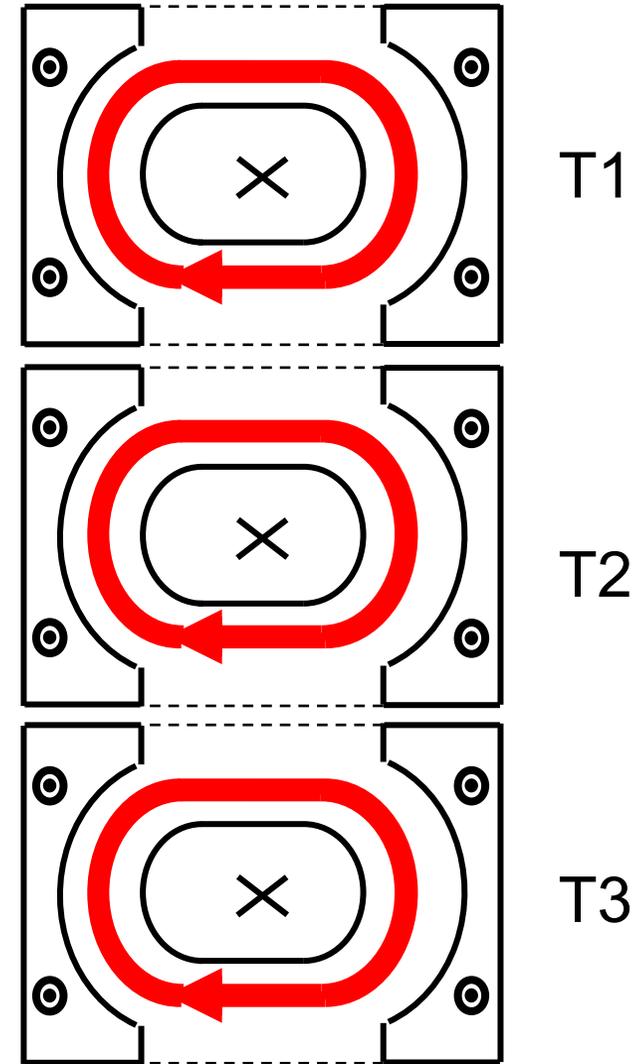

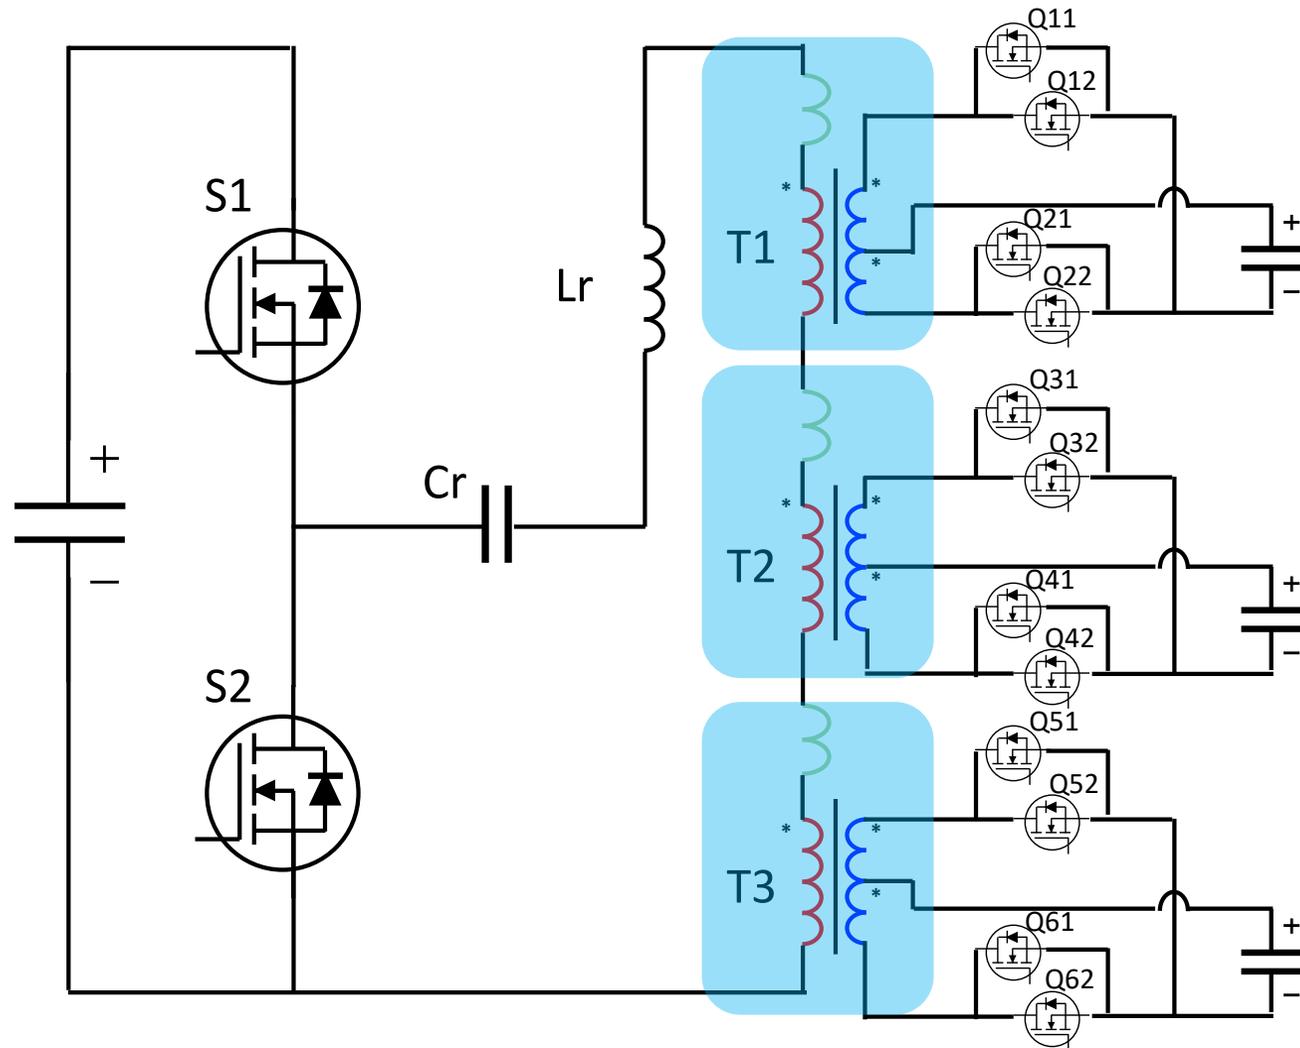

GaN Sense with GaNSafe:

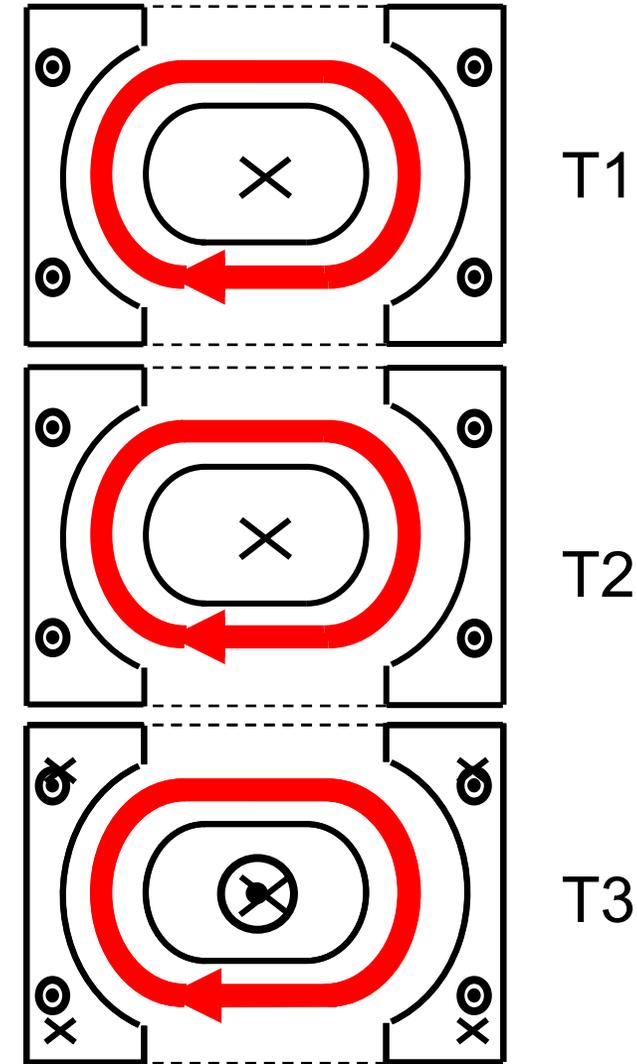

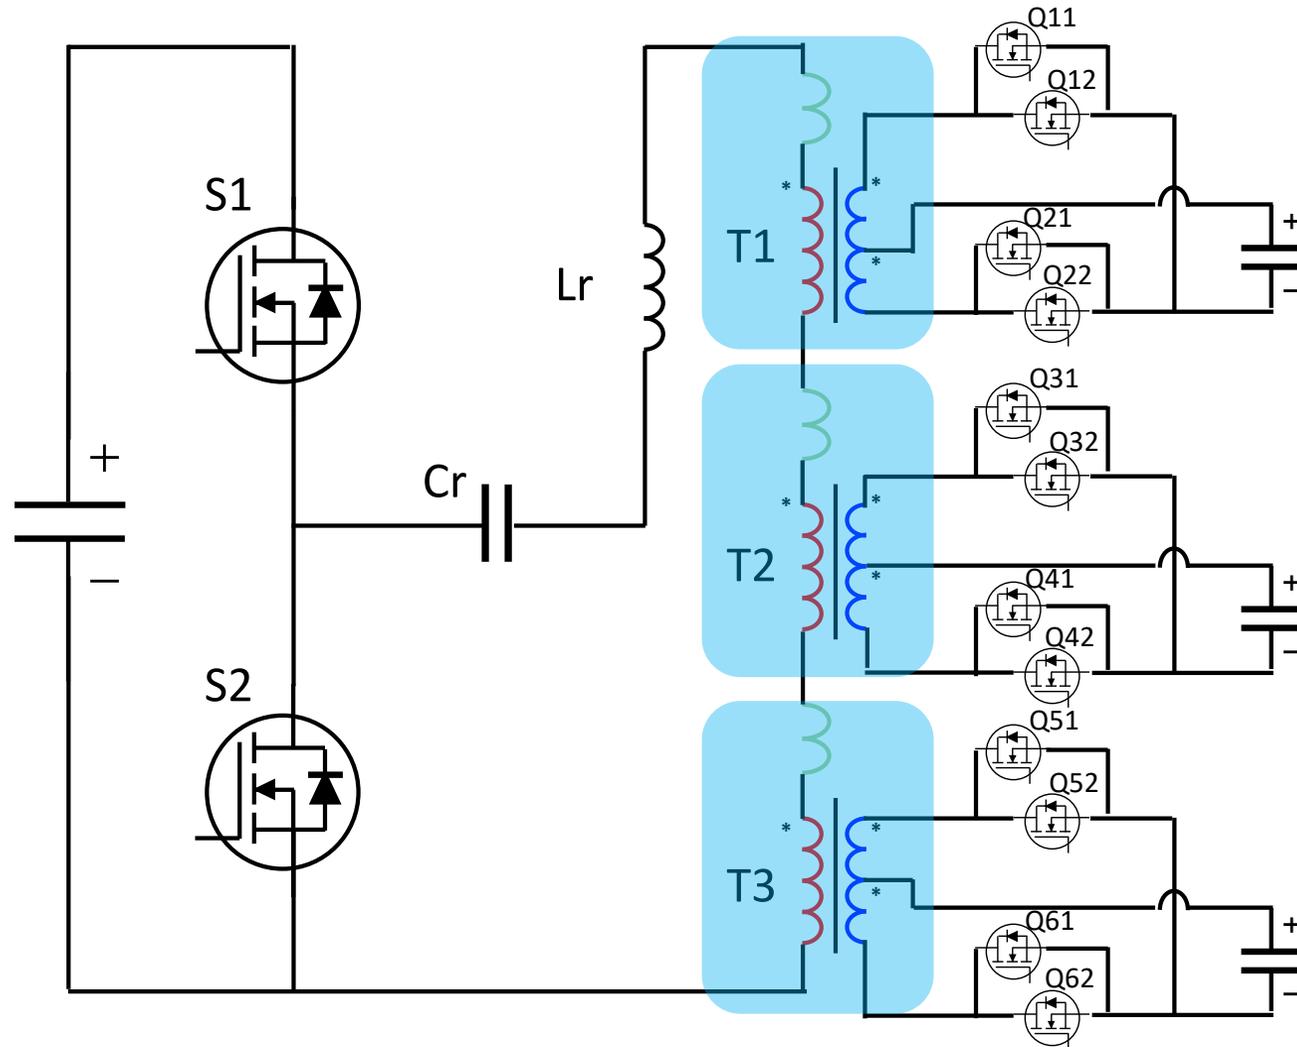

- ✓ Integrated gate driver
- ✓ Short circuit protection
- ✓ Over temperature protection
- ✓ Turn on/off dv/dt control

# Winding Distribution

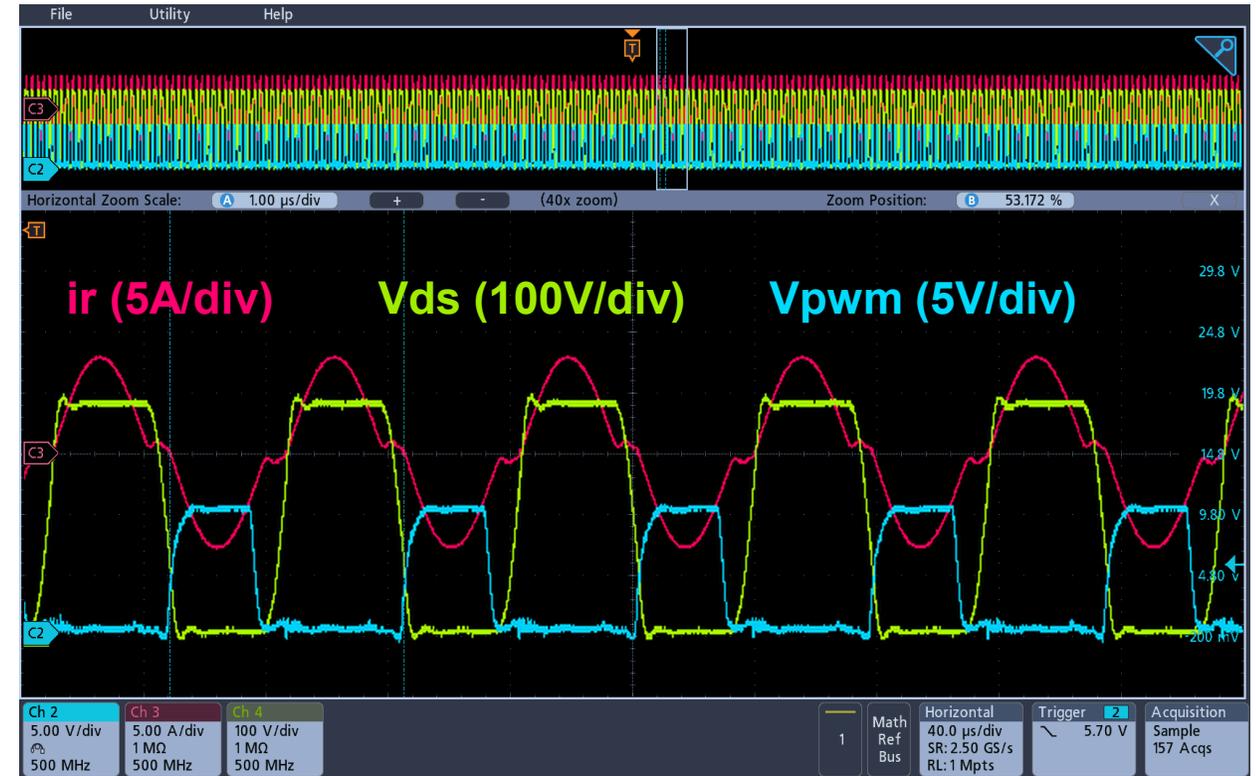

**Flux Cancellation is effective**

90mm x 30.5mm x 11mm

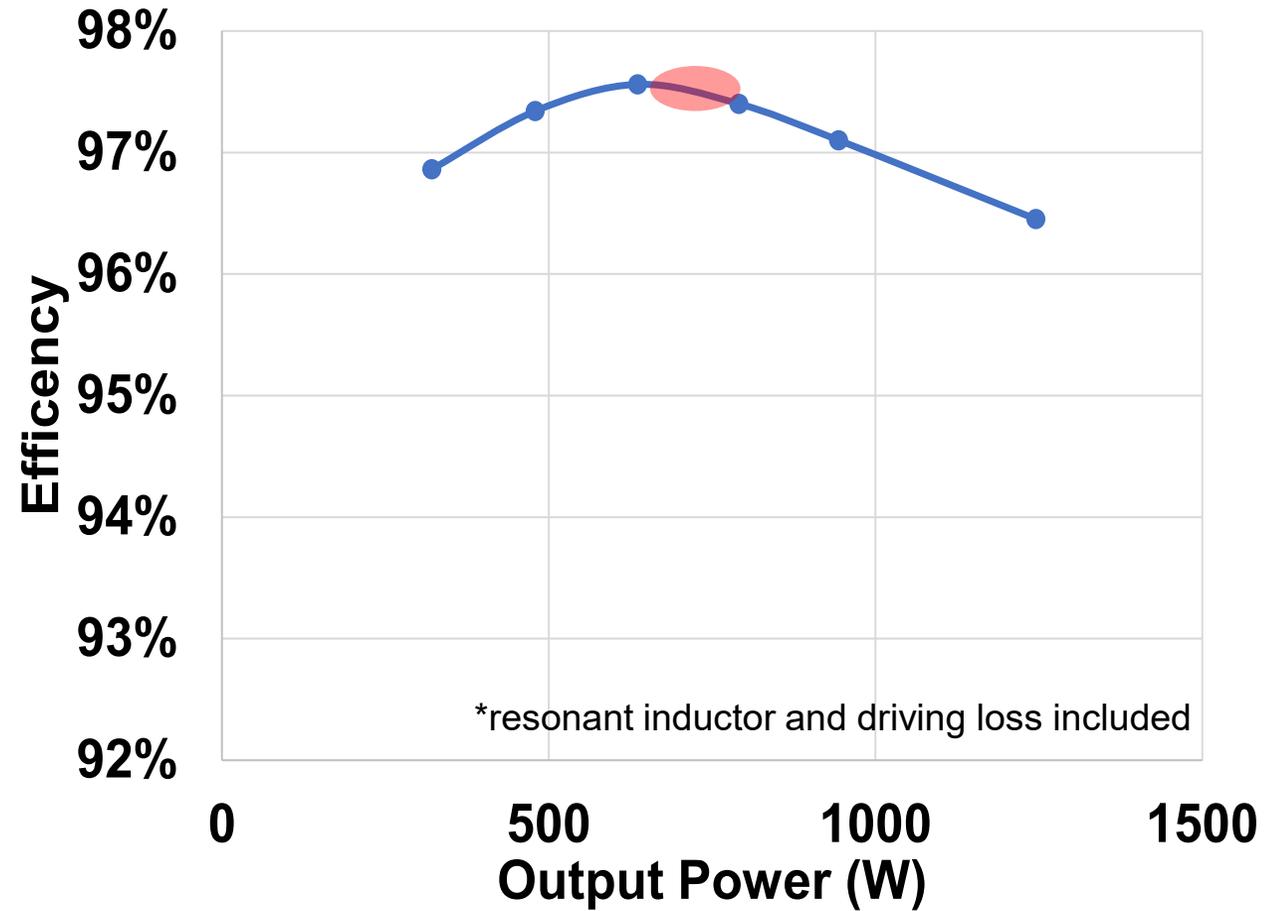

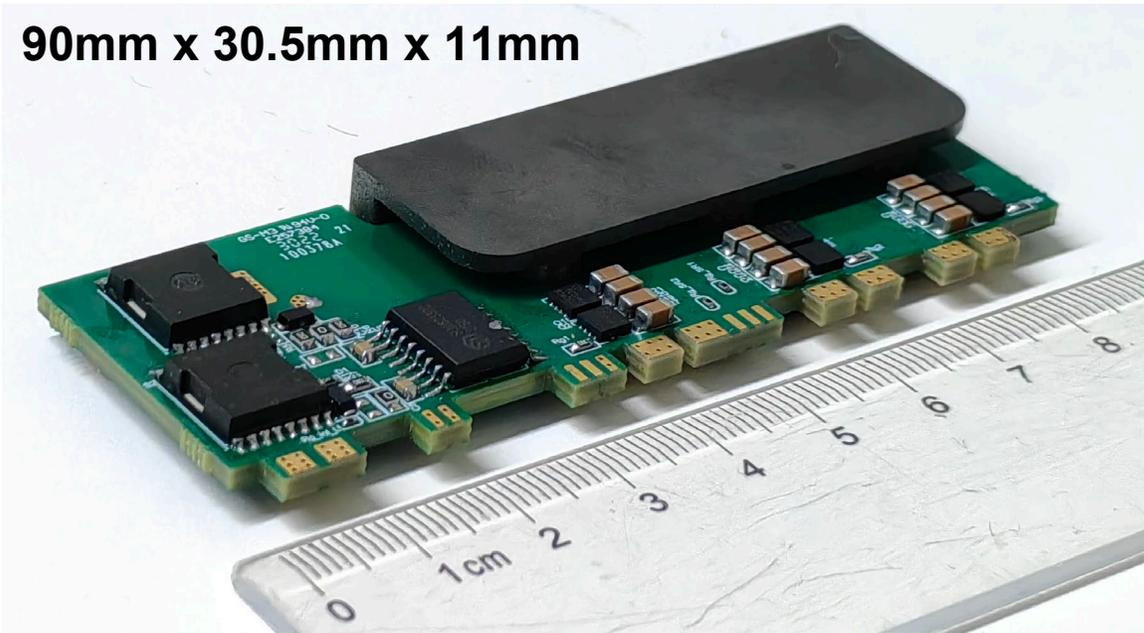

## 600kHz Switching

High frequency enables high power density and PCB winding

90mm x 30.5mm x 11mm

➤ Peak efficiency @half load is over 97.5%

- ✓ Data Center and AI needs high-efficiency and high-power density power supply.
- ✓ Integrated GaN power IC from Navitas provide reliable gate drive as well as robust protection for industrial application.
- ✓ A matrix transformer is proposed utilizing flux cancellation to reduce core size and loss.
- ✓ High-frequency operation using GaN power IC help to future reduce the transformer size and make it possible to utilize PCB winding.
- ✓ 1.5kW LLC module prototype with the size of 90mm x 30.5mm x 11mm is built and peak efficiency of 97.5% @half load is achieved.

***“Navitas is a pure-play, next-generation power semiconductor company and drives to Electrify Our World™”***

***Thank you***
